Dear Hiring Manager,

I'm genuinely excited about the possibility of joining your team in a Data Science or Machine Learning role. With a unique blend of Mechatronics and Botany—and hands-on experience in NLP, forecasting, and deep learning—I bring an analytical yet creative mindset. I'm the type of problem-solver who loves tackling challenges from multiple angles and learning something new every day.

I've built end-to-end projects like a Fake News detector (using GloVe+LSTM), a SARIMA-based stock price forecaster, a movie recommender via collaborative filtering, a FLAN-T5 dialogue summarizer, and a cuisine-generating NLP model tuned for Indian recipes. Each project was self-driven—not because it was easy, but because it pressed me to grow. I used tools like Python, SQL, scikit-learn, Keras, and Tableau to bring these solutions to life on real datasets.

Honestly, I'm hungry to prove myself. I don't ask for handouts—I ask for a chance. Whether it's cleaning data late at night, writing documentation early in the morning, or just listening and adapting—I'm ready to earn my place and contribute from day one. I'd love the opportunity to bring this energy to your team and discuss how I can help drive your projects forward.

Thank you for your time and consideration.

Sincerely,
Shakil Ansari
